What's Rikidar Authenticator?

Rikidar Authenticator is a [Single sign-on](#) service that lets you access all Rikidar platforms with a single account, instead of creating a separate account for every platform.

These platforms include:

- [Weblate](#) for translation
- [Forgejo](#) for code sharing
- This very wiki for documentation

How does Rikidar Authenticator work?

Rikidar Authenticator uses [PocketID](#), a [Passkey-only](#), self-hosted solution for creating and managing user accounts.

Because it supports only Passkeys, you don't need usernames or passwords, which makes it incredibly secure and resistant to phishing attacks. You also don't need to remember any passwords.

Advantages
1. One account for every Rikidar platform 2. Very secure 3. Convenient
Disadvantages
1. Password manager or physical token is required

Getting a Rikidar Authenticator account

To get an account:

1. Go to <https://auth.rikidar.eu>
2. Click 
3. Fill out the required details

NOTE:

The  field is your displayed username across all platforms

4. Click 
5. Once prompted, save the Passkey into your manager of choice - which can either be a password manager, or a physical key, such as Yubikey

Your account is now ready for use! Browse through the [Community Platforms](#) to learn where you can use it, or jump straight to the most used ones depending on the use:

- [Forum](#) for talking about Cork, Groove, etc.
- [Weblate](#) for translating Cork, etc.

TIP:

To learn more about Weblate, read its [documentation page](#)

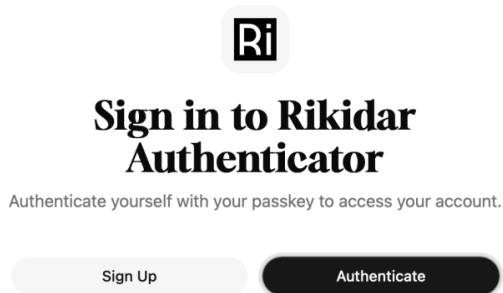

- [Rikidar Code](#) for contributing to code

Using Rikidar Authenticator

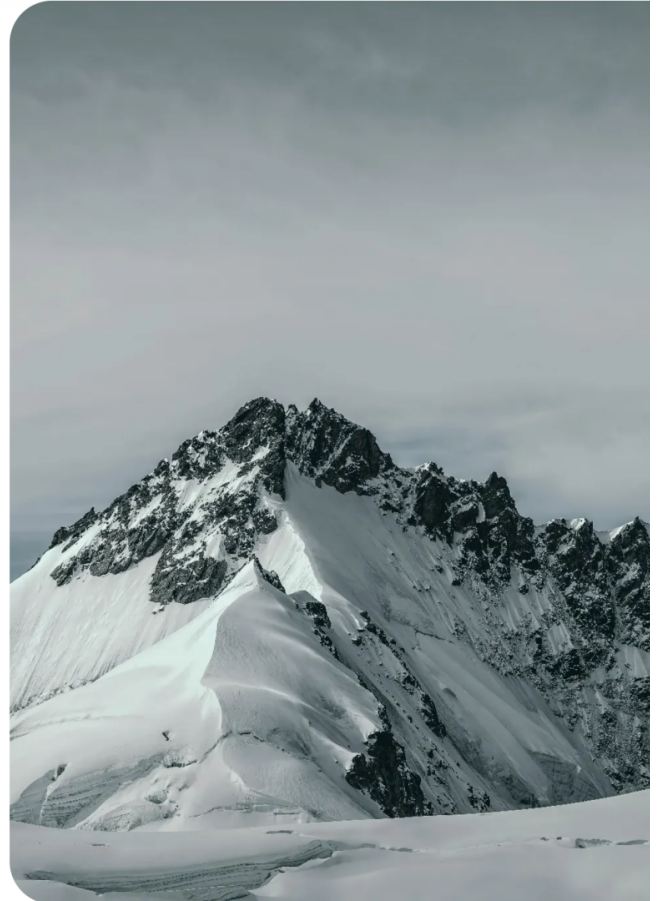

Once you have an account, you can sign into the many supported services and platforms.

The workflow for signing up is the same on every platform:

1. On the platform, click the appropriate button for logging in
2. You will be redirected to a login page:

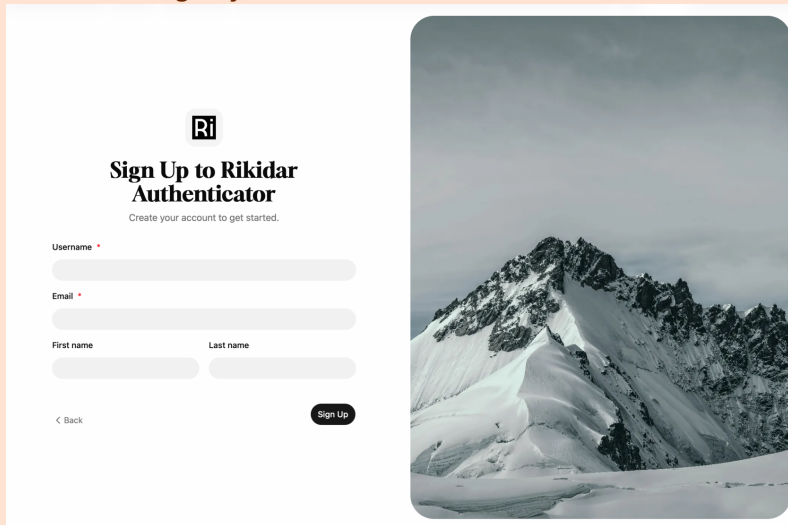

Alternative Sign In Methods

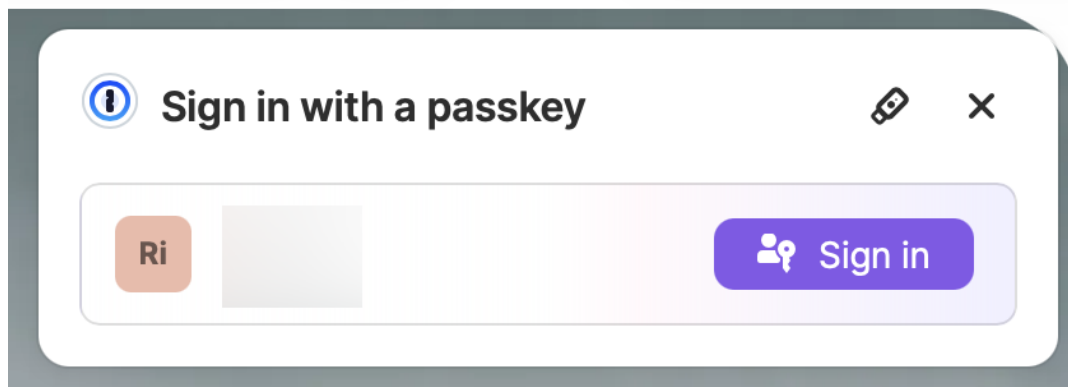

WARNING:

If you see a page that says **Sign up to Rikidar Authenticator**, you are instead on another page that is used for registrations. In that case, you should report the button that got you there.

3. You now have two options on how to log in:

- Click `Authenticate` or `Log In`, which will activate your Passkey workflow of choice

- On the bottom of the page, click `Alternative Sign In Methods` to see other sign-in options, namely:
 - **Sign in with another device:** Use a Passkey that you have saved on another device
 - **Login code:** In case you lost your Passkey, used to recover your account

4. You will be logged into the app, and forwarded back
